Judgment criteria of failure for the reliability

Measuring items	Symbol	Measuring conditions	Judgement criteria for failure
Forward voltage	V _F (V)	I _F =60mA	Over U ¹ x1.2
Reverse current	I _R (uA)	V _R =5V	Over U ¹ x2
Luminous intensity	I _v (lm)	I _F =60mA	Below S ¹ X0.5

Note:

1. U means the upper limit of specified characteristics. S means initial value.
2. After each test, remove test pieces, wait for 2 hours and test pieces have returned to ambient temperature, then take next measurement.

◆ Storage:

1. recommended storage condition: At 5°C-30°C and relative humidity 50% RH Max.
2. After this bag is opened, devices that will be applied to infrared reflow, vapor-phase reflow, or equivalent soldering process must be:
 - a. completed within 24 hours
 - b. stored at less than 30% RH.
3. Devices require baking before mounting, if:
 - 2a or 2b is not met.
4. If baking is required, devices must be baked under below conditions:
 - 12 hours at 60°C±3°C

◆ Note:

- (1) Care must be taken not to damage LED's silicone resin while exposing to high temperature or contact LED's silicone resin with hard or sharp objects, such as metal hook, tweezers or sand blasting..
- (2) Current limiting resistor must be used in the circuit to drive Grand LEDs within the rated figures and not to overload Grand LEDs with instantaneous voltage at the turning ON and OFF cycles. When using pulse driving, the average current must be within the rated figures. And the circuit should be designed to avoid reverse voltage when turning off the Grand LEDs.

◆ Package and Label of Products:
